Use Figma to create an interactive diagram illustrating the components of a basic cellular system.

Aim

To create an interactive diagram illustrating the components of a basic cellular communication system using Figma.

Procedure

1. Open the Figma website and create a new design file.

2. Create a frame and give it the title “Basic Cellular System.”

3. Add rectangles or icons to represent the main components:

• Mobile Station (MS): Mobile phone used by the user.

• Base Transceiver Station (BTS): Communicates with mobile phones.

• Base Station Controller (BSC): Controls and manages multiple BTSs.

• Mobile Switching Center (MSC): Handles call switching and mobility management.

• PSTN: Connects cellular networks to the public telephone network.

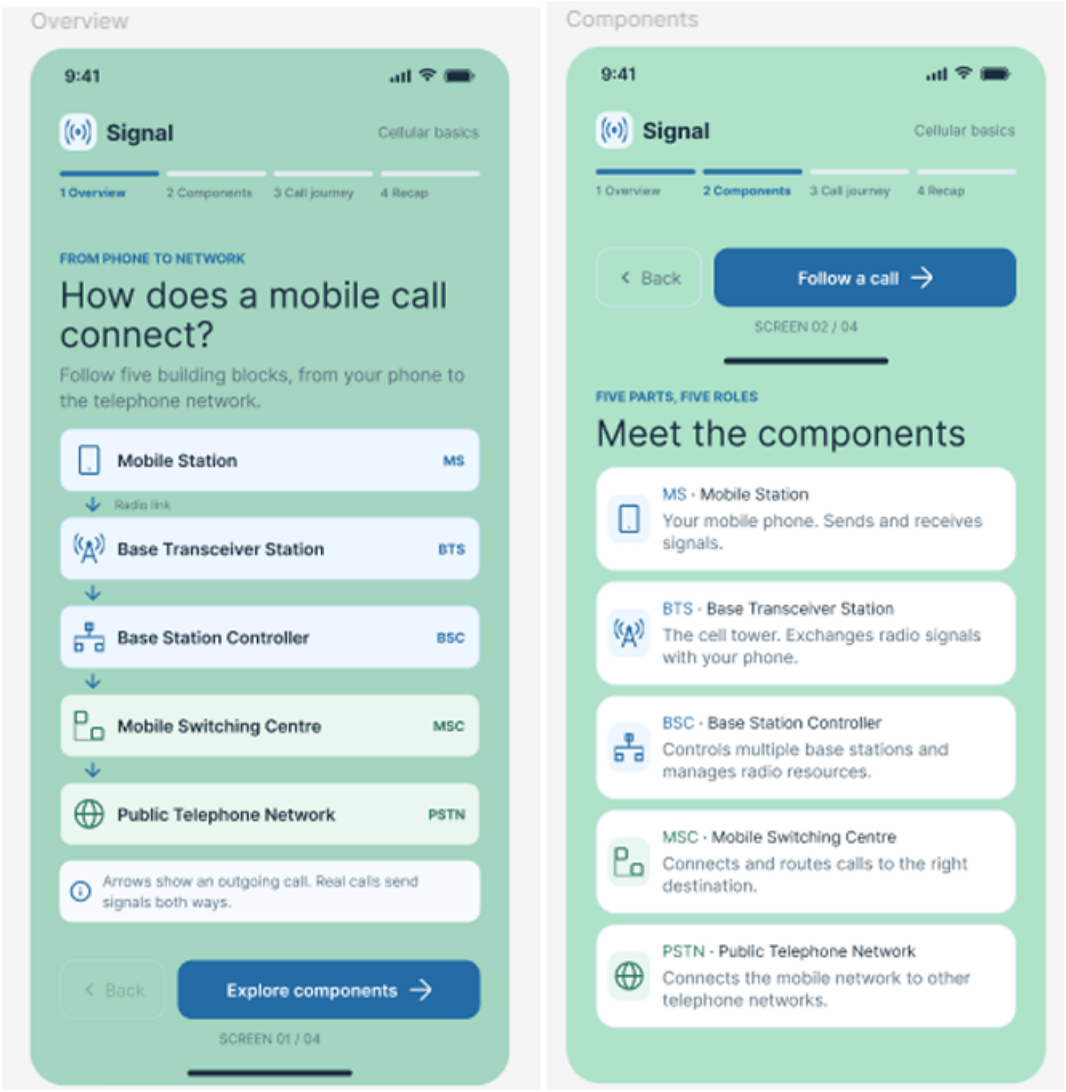

4. Arrange the components in the following order and connect them using arrows Mobile Station → BTS → BSC → MSC → PSTN

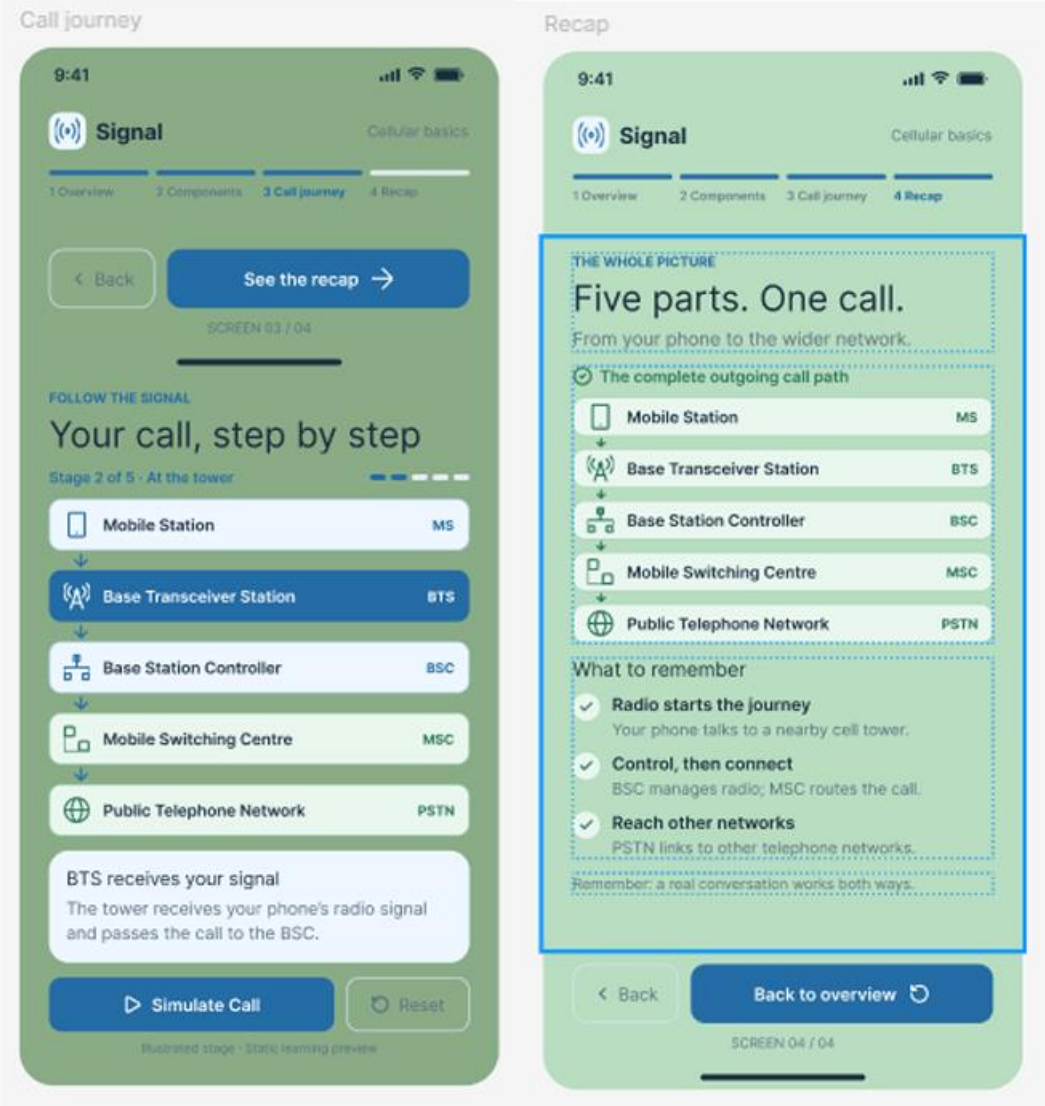

5. Use different colors and labels to make the diagram clear and easy to understand.

6. Select each component and add interactive descriptions using Figma’s prototype features.
7. Connect the components through prototype interactions so users can click them to view details.

8. Preview the design using Present mode and test the interactions.

Implementation:

Result:

Successfully created an interactive diagram of a basic cellular communication system using Figma, illustrating its major components, their functions, and the communication flow between them.
